## ABSTRACT

In low developing countries like Uganda, most menstruating girls and women struggle to find clean water for washing and reliable absorbent materials during their menstruation. This paper describes a social enterprise model that offers a solution to this problem. The solution uses crowd funding to raise money to purchase re-usable hygiene kits and donate them to school girls in Uganda. After two years of pilot study and further research, the Organization will start producing its own re-usable kits while providing jobs and training to young women. This paper builds on research by Hennegan et al. (2016).
