Abstract

In the framework of the United Nations Sustainable Development Goals (SDGs), emphasizes the significance of partnerships for achieving global sustainability. This study attempts to focus on Hualien City in Taiwan, exploring the establishment of local partnerships by the local government to implement SDG 17. The study found that: (1) Through collaborative processes, network partnerships are formed to drive local development and facilitate policy implementation. (2) Roles in collaborative partnerships are dynamic. (3) Various contextual situations result in diverse connections within partnership networks. Consequently, communication and translation processes enhance trust and consensus among participants, gradually establishing a stable internal state.
